

Mobile Application and Content Provisioning using Web Services Technology

ABSTRACT

A method for provisioning one or more mobile applications. The method including deploying the mobile application as a web service in a UDDI directory, downloading the mobile applications from the UDDI directory by invoking the web service. The method may also include locating the mobile application in the UDDI directory. The method further includes extending a WSDL template to define the mobile application, wherein the extending provides for wrapping the mobile application as the web service, and publishing the WSDL defined mobile application in the UDDI directory.
